

Password Strength Analyzer

Project Overview

Password Strength Analyzer is a modern web-based application designed to help users evaluate the security and strength of their passwords. The application performs real-time password analysis based on multiple security criteria and provides users with a detailed security report along with recommendations for improving password strength.

The project focuses on creating a simple, responsive, and user-friendly interface while demonstrating practical concepts related to **password security, frontend development, and cybersecurity fundamentals**.

Features

Real-Time Password Analysis

The application analyzes the password instantly as the user enters it.

Password Strength Meter

Passwords are categorized into the following levels:

-  Very Weak
-  Weak
-  Moderate
-  Strong
-  Very Strong

A security score is also generated based on the password requirements successfully completed.

Security Checks

The application evaluates passwords based on:

- Minimum password length of 8 characters
- Recommended password length of 12 characters
- Presence of uppercase letters
- Presence of lowercase letters
- Presence of numbers
- Presence of special characters
- Detection of commonly used passwords
- Detection of excessive repeated characters

Smart Suggestions

The application provides personalized suggestions to help users improve their password security.

Examples include:

- Add an uppercase letter
- Use more characters
- Add numbers
- Add special characters
- Avoid common passwords
- Avoid repeated characters

Session History

Users can view previous password analyses performed during the current browser session.

For privacy and security, the application does **not store the actual passwords**. Only the following information is stored:

- Password length
- Security score
- Strength level
- Date and time of analysis

Technologies Used

- **HTML5**
- **CSS3**
- **JavaScript**
- **Modern Frontend Technologies**
- **Local Browser Storage**

User Interface

The website features a modern cybersecurity-inspired interface with:

- Dark theme design
- Responsive layout
- Interactive password strength meter
- Dynamic security indicators
- Smooth animations and transitions

- Professional dashboard-style components

The application is optimized for:

-  Mobile Devices
 -  Laptops
 -  Desktop Screens
 -  Tablets
-

Privacy and Security

User privacy is an important part of this project.

- Passwords are analyzed locally in the browser.
 - No passwords are sent to external servers.
 - Actual passwords are not saved in the session history.
 - No external database is required.
-

Project Structure

Password-Strength-Analyzer/

```
|
|
|— index.html
|— style.css
|— script.js
|— README.md
|
└─ assets/
    |— images/
    └─ icons/
```

How It Works

1. The user enters a password.
2. The application analyzes the password in real time.
3. Multiple security requirements are checked.
4. A security score is calculated.

5. The password is categorized by strength.
 6. Suggestions are generated for failed security checks.
 7. A detailed security report is displayed.
 8. Analysis results are saved temporarily in session history without storing the actual password.
-

How to Run the Project

Method 1: Open Directly

Download or clone the repository and open:

index.html

in any modern web browser.

Method 2: Clone the Repository

git clone <https://github.com/your-username/password-strength-analyzer.git>

Then open the project folder and run index.html.

Learning Outcomes

This project helped in understanding:

- Password security fundamentals
 - JavaScript string manipulation
 - Conditional statements
 - Regular Expressions
 - DOM Manipulation
 - Event Listeners
 - Responsive Web Design
 - Local Storage and Session Storage
 - User Interface Design
 - Frontend Development
-

Future Improvements

Possible future upgrades include:

-  Secure Password Generator
-  Copy Generated Password

-  Multiple Language Support
 -  Advanced Password Security Analytics
 -  Theme Customization
 -  Password Breach Detection API Integration
 -  Progressive Web App (PWA) Support
 -  AI-based Password Security Recommendations
-
